DD1PWMCVRS	Vibrating	yes	Water line	2250 W	580x415x480	Star stainless steel

This model represents the ensemble of the adopted technical solutions because in addition to the characteristics of DD1 Optima machine it presents another important quality: Power button, which gives the opportunity to obtain more steam, at a higher pressure and with enviable supply time in a very short time (almost 60 seconds). This function is essential to professional and demanding persons. It is very useful for people who need to emulsify and warm big quantity of liquids, without repeating the operation more times. The boiler would permit to increase pressure, but we decided to keep an optimal balance between steam and temperature to guarantee the delivery of an optimum coffee while the steam function is active. Power function is used for the first switching of the day to reduce the waiting time needed to bring the machine at the ideal temperature to deliver the first coffee.

This model is equipped with the useful water tray, removable and completely realized in stainless steel AISI 304.
